

Install GameMaker

Let Dr. Kirk know you are ready to install so she can reset your computer. Once Dr. Kirk re-starts your computer, follow the following instructions and let her know when you are finished.

- Open the computer's documents folder.

- Click on "GM Studio Install" it should be an .exe file (probably has a green/black icon).

- Click "Next" then **UNCHECK "GameMaker Player" (the last check box)**.

- Click Next, Next, Finish until it completes the install.

- If it asks if you want "Beta" or "Stable" just click "Ok" to stay with Beta.

- If it asks for updates click "Skip this version".

- Once done it will ask for a license number. Open the word document "gamemaker" from the documents folder and copy that number- paste it over where it says "license" or use this license number: 8cab6870-2416-0133-3276-00259089258e

- It will say GameMaker needs to restart- click "ok". If it does not close the program automatically close and go down to START to re-open. Then close it and reopen from start one more time.

- If you want to change your desktop background you may do so now- do not take more than 5 min doing this. **Let Dr. Kirk know when your computer settings are ready to be saved.**

****Be sure you are logged out of Google or anything else because setting will save and others will be logged in to your account if it remains signed in.**
